- Broadly speaking, editing is considered the final step in the writing process before publication. However, the editing phase includes multiple types of editing, all of which are intended to refine the written work into an easy-to-understand and mistake-free version.
- Two [types of editing](#) that are commonly used interchangeably are copy editing and proofreading. Both types of editing clean up writing, but each has its distinct contribution to the process.

- **What is copy editing?**
- Copy editing takes place after a substantive edit but before proofreading. The objective of copy editing is to polish the copy so that it's clear while retaining the author's voice and meaning. Copy is defined as "matter to be printed," and a copy editor is responsible for this polishing step. They comb through a written work to identify and correct:
  - [Grammar](#)
  - [Spelling](#)
  - [Tone](#) and style deviations
  - [Wordiness](#)
  - Clunky [transitions](#)
  - Confusing [syntax](#)
  - Problematic or misused words
  - Uneven flow
- After a copy edit, the copy should be a cohesive, readable piece that adheres to the publication's tone and style guidelines.

- **What is proofreading?**
- [Proofreading](#) takes place after the copy editor has completed their work and before the work is published. This step gets its name from the traditional typesetting process. Before multiple book copies were printed, a test version of a manuscript or book, called a “galley proof,” would be created. Proofreaders would read through these proofs to spot and fix mistakes before moving them forward to printing.

- A [proofreader is a specialized editor](#) who's tasked with reviewing the mechanical elements of the copy. They are the final set of eyes to address issues involving:
  - Grammar
  - Spelling
  - [Punctuation](#)
  - [Capitalization](#)
  - Formatting
  - On-page layout
- In addition to correcting mechanical, fine line oversights that might have slipped through the editing process, proofreaders are responsible for fixing on-page elements. These might include inconsistent headers and subheads, page numbers and breaks, placement of visual assets like a table or chart, and other formatting issues.
